ShorrBoard® Infant/Child Portable Length-Height Measuring Board

Weigh and Measure (formerly Shorr Productions) is the sole manufacturer of the **ShorrBoard® Portable Height-Length Measuring Boards** which are in use in more than 120 countries worldwide by a variety of organizations, institutions, and international agencies for more than 35 years. Manufactured in the USA, the versatile **Infant/Child ShorrBoard®** (0-130 cm X 0.1 cm / 0-50 inches X 1/8 inch) is convertible since the same board is used to measure the recumbent length of infants less than 2 years of age laying down and the standing height of children 2 years of age. This is a two-piece measuring board that collapses and is secured to a compact unit of 29.1 inches (73.9 cm) where the two panels are held together with self-contained spring-loaded hand-turned bolts.

ShorrBoards® are made of high quality hardwoods with a weather-resistant finish. They are portable, lightweight (less than 4.6 kg / 10.3 lb), extremely strong, durable and accurate, easy to assemble and use, and have an adjustable, removable two-inch wide, very strong braided nylon shoulder strap for easy carrying. The measuring tape is available in English units, metric units or with both English and metric units.

The **Auto-Lock** ShorrBoards® have a moveable head/footpiece that slides smoothly up and down the measuring board and instantly locks automatically in position where it is placed on the board above the subject's head for standing height (there are no knobs to turn) or at the child's feet when taking recumbent length measurements,
